Hello, and welcome to my portfolio.

I am an Information Technology student interested in understanding how computer systems, networks, and digital services work together. This portfolio is part of my learning journey and explores the certifications, qualifications, and resources that can support a career in System Administration.

My goal is to strengthen my technical foundation through continuous learning and hands-on practice. I want to develop the ability to configure systems, troubleshoot issues methodically, apply security best practices, and help keep IT services reliable.

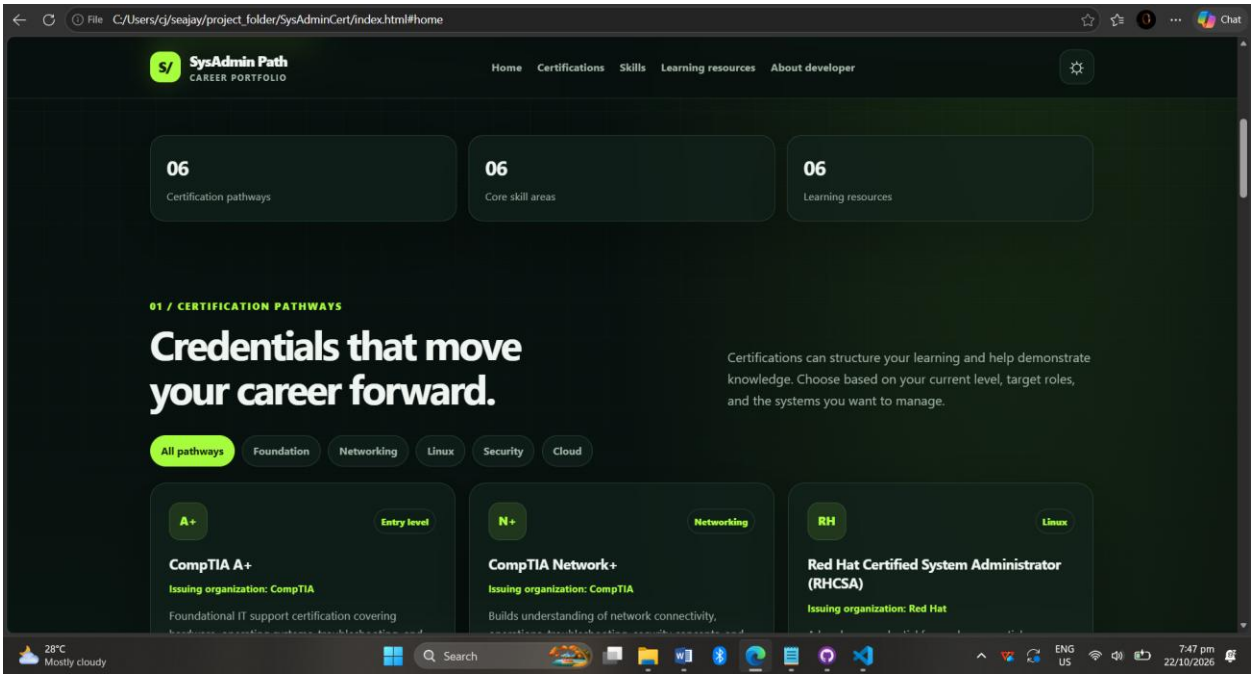

- Build practical experience with Windows and Linux environments.
- Improve networking, scripting, troubleshooting, and security skills.
- Work toward relevant certifications as my knowledge develops.
- Develop skills in system administration and IT support.
- Improve my ability to communicate technical concepts effectively.

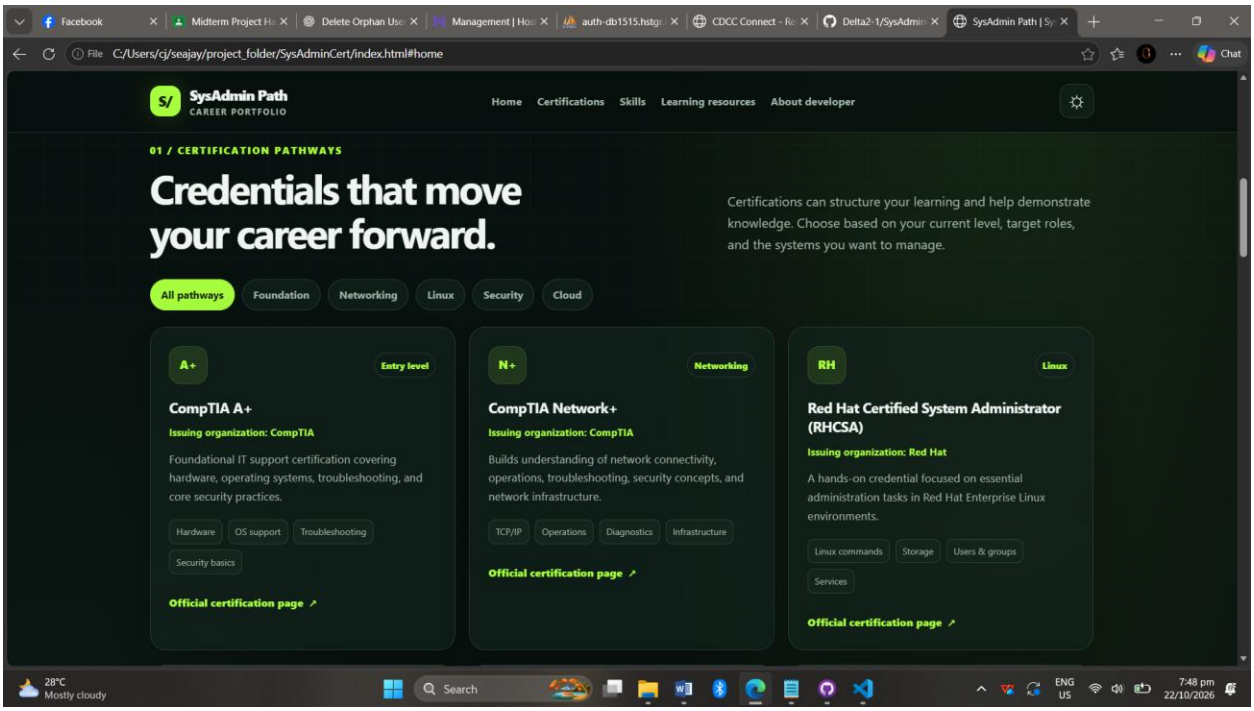

Research & source integrity

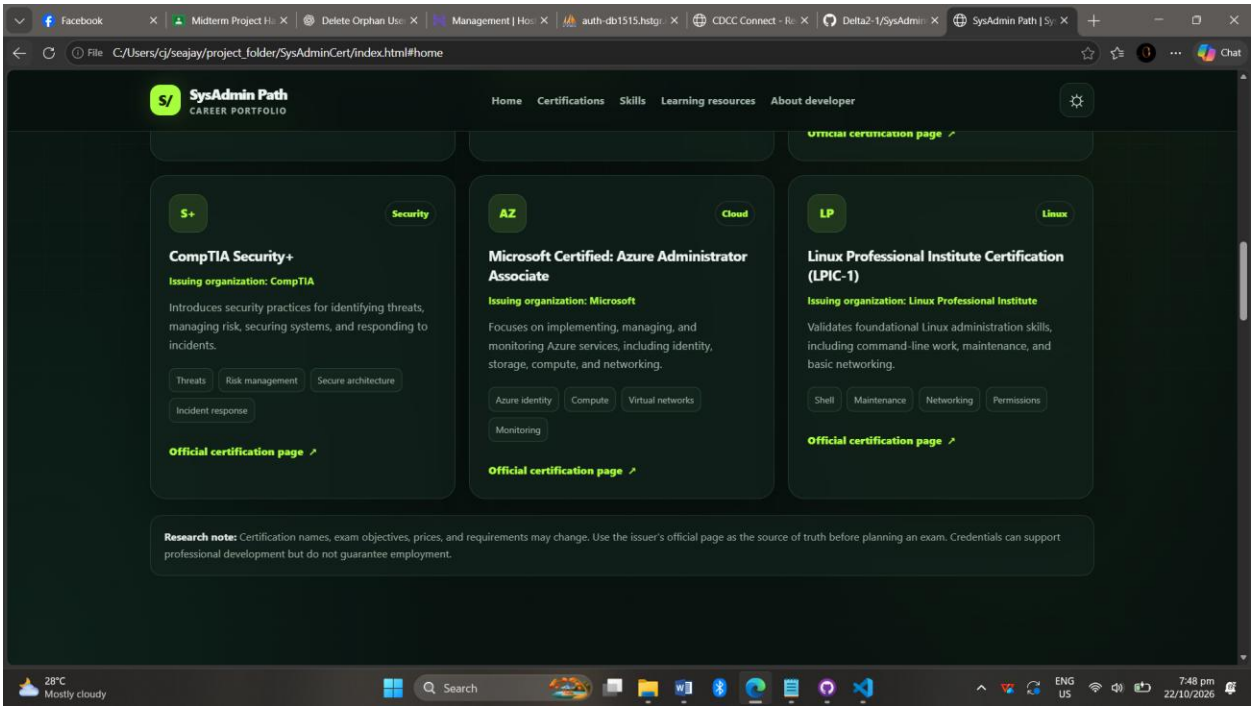

Use official information.

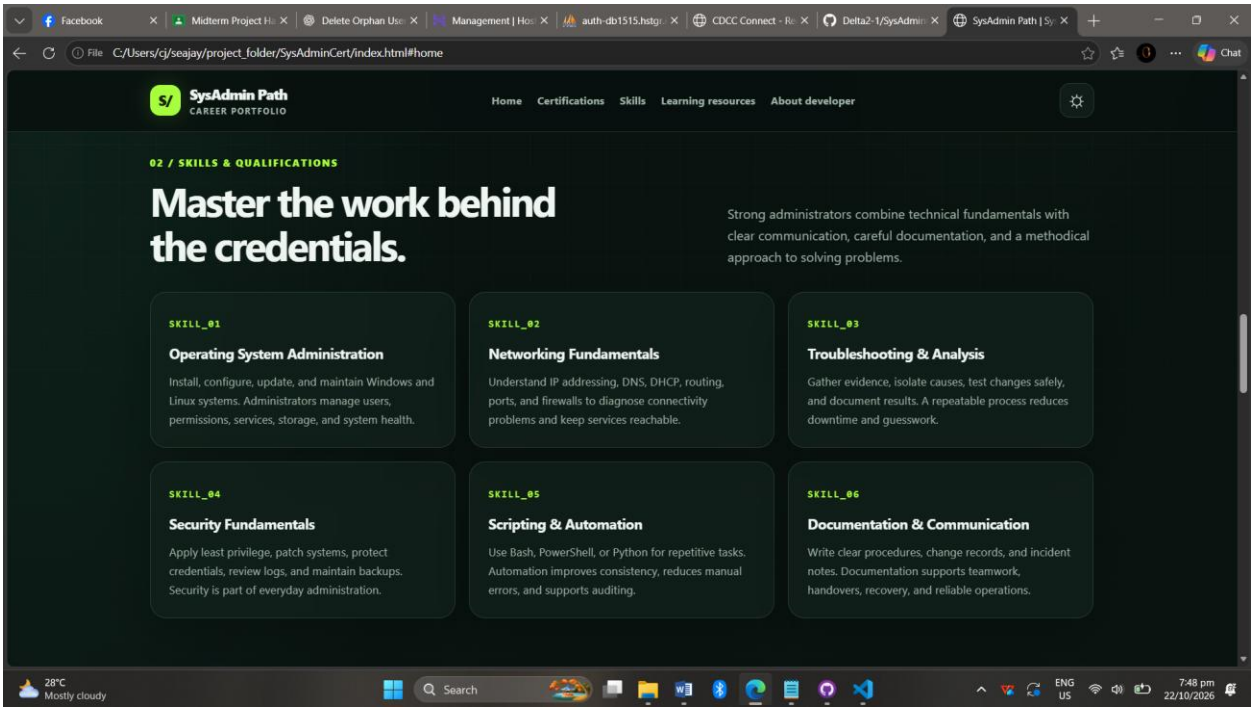

Certification summaries in this portfolio are concise educational overviews. Issuer pages linked on each card should be used to verify current certification names, exam objectives, prerequisites, fees, and renewal policies. Learning resource links lead to the named providers' sites.

01 / CERTIFICATION PATHWAYS
Credentials that move your career forward.
Certifications can structure your learning and help demonstrate knowledge. Choose based on your current level, target roles, and the systems you want to manage.
All pathways
Foundation
Networking
Linux
Security
Cloud
A+
Entry level
CompTIA A+
Issuing organization: CompTIA
Foundational IT support certification covering hardware, operating systems, troubleshooting, and core security practices.
Hardware
OS support
Troubleshooting
Security basics
Official certification page ↗
N+
Networking
CompTIA Network+
Issuing organization: CompTIA
Builds understanding of network connectivity, operations, troubleshooting, security concepts, and network infrastructure.
TCP/IP
Operations
Diagnostics
Infrastructure
Official certification page ↗
RH
Linux
Red Hat Certified System Administrator (RHCSA)
Issuing organization: Red Hat
A hands-on credential focused on essential administration tasks in Red Hat Enterprise Linux environments.
Linux commands
Storage
Users & groups
Services

About developer
S+
Security
CompTIA Security+
Issuing organization: CompTIA
Introduces security practices for identifying threats, managing risk, securing systems, and responding to incidents.
Threats
Risk management
Secure architecture
Incident response
Official certification page ↗
AZ
Cloud
Microsoft Certified: Azure Administrator Associate
Issuing organization: Microsoft
Focuses on implementing, managing, and monitoring Azure services, including identity, storage, compute, and networking.
Azure identity
Compute
Virtual networks
Monitoring
Official certification page ↗
LP
Linux
Linux Professional Institute Certification (LPIC-1)
Issuing organization: Linux Professional Institute
Validates foundational Linux administration skills, including command-line work, maintenance, and basic networking.
Shell
Maintenance
Networking
Permissions
Official certification page ↗
Research note: Certification names, exam objectives, prices, and requirements may change. Use the issuer's official page as the source of truth before planning an exam. Credentials can support professional development but do not guarantee employment.

About developer
02 / SKILLS & QUALIFICATIONS
Master the work behind the credentials.
Strong administrators combine technical fundamentals with clear communication, careful documentation, and a methodical approach to solving problems.
SKILL_01
Operating System Administration
Install, configure, update, and maintain Windows and Linux systems. Administrators manage users, permissions, services, storage, and system health.
SKILL_02
Networking Fundamentals
Understand IP addressing, DNS, DHCP, routing, ports, and firewalls to diagnose connectivity problems and keep services reachable.
SKILL_03
Troubleshooting & Analysis
Gather evidence, isolate causes, test changes safely, and document results. A repeatable process reduces downtime and guesswork.
SKILL_04
Security Fundamentals
Apply least privilege, patch systems, protect credentials, review logs, and maintain backups. Security is part of everyday administration.
SKILL_05
Scripting & Automation
Use Bash, PowerShell, or Python for repetitive tasks. Automation improves consistency, reduces manual errors, and supports auditing.
SKILL_06
Documentation & Communication
Write clear procedures, change records, and incident notes. Documentation supports teamwork, handovers, recovery, and reliable operations.

About developer
A PRACTICAL STARTING POINT
Your roadmap, one layer at a time.
You do not need to learn everything at once. Build a reliable base, then grow toward a specialization that fits your interests.
Start learning ↗
01
Build your foundation
Learn computer hardware, operating systems, command-line basics, and core troubleshooting.
02
Practice in a home lab
Use virtual machines to install Linux, configure users, set up services, and test networking safely.
03
Choose a certification path
Compare official exam objectives with your current skills and the roles you want to pursue.
04
Document real projects
Keep notes, diagrams, scripts, and lessons learned to demonstrate practical problem-solving.

About developer
03 / LEARNING RESOURCES
Learn from reliable technical sources.
Start with official documentation and structured learning platforms. Pair reading with hands-on practice in a safe lab environment.
OFFICIAL DOCUMENTATION
Red Hat Documentation
Product documentation and practical guidance for learning and administering Red Hat Enterprise Linux systems.
Explore documentation ↗
GUIDED TECHNICAL LEARNING
Microsoft Learn
Free learning paths and technical documentation covering Azure, Windows, identity, networking, and administration.
Browse learning paths ↗
LINUX LEARNING
Linux Journey
A learning resource introducing Linux concepts, command-line use, processes, permissions, and administration basics.
Start Linux Journey ↗
CERTIFICATION PREPARATION
CompTIA Certifications
Review official certification details, exam objectives, and preparation options for CompTIA credentials.
View certifications ↗
PRACTICE ENVIRONMENT
Ubuntu Server Documentation
Official guides for server installation, networking, security, storage, and common server administration tasks.
Read server guides ↗
SCRIPTING AND AUTOMATION
PowerShell Documentation
Learn scripting, command discovery, automation concepts, and administrative workflows using Microsoft's official docs.
Learn PowerShell ↗
